

Unify Brand Kit

BUILT FOR THE ONES WHO BUILD.

Brand kit for Unify, the academic platform for Nigerian university students. Version 2, September 2026. Built from the April 30 token set, the Unify brand guide, the 221 Students impact post and the contributor flyer.

Fonts: Playfair Display and DM Sans, both free on Google Fonts. The accompanying zip has tokens.json, tokens.css and every example as HTML.

One brand, four surfaces

Unify is the academic platform for Nigerian university students, starting with LASU Faculty of Engineering. Everything carrying the name should feel like something a student would pay for: restrained, editorial, warm. It should never look like a game.

The system has one source of premium: **Playfair Display on the moments that land, DM Sans on everything read line by line, and a lot of near-black and warm off-white with green used surgically.** Every surface below keeps that. What changes between surfaces is density and loudness, never the brand.

The four surfaces

Surface	Its job	Loudness	Read
Product UI (dashboard, explore, profile, course lists)	Help students find things	Medium: dark banners, Playfair titles and numbers, card grids, green CTAs	Product UI section
Website	Show what Unify is and get people in	Medium to loud: the product UI with a larger hero	Product UI section
Notes UI (reading mode in Learn)	Help students learn	Quiet: one column, Playfair only on headings	Notes UI section
Social posts and flyers	Get attention in a feed	Loud: heavy sans headlines, one Playfair moment, fixed template	Social section

The website and the product share one shell, so a student who has seen the site already knows the app.

The Playfair rule

Playfair Display is what makes Unify look premium. It is a display face with thin strokes, so it is set at 16px and above, on text people glance at:

- Use it for the wordmark, the tagline, page and topic titles, subtopic headings, card titles, big numbers in the product, quiz and recall questions, and quotes.
- Never set a paragraph, an answer option, a button, a label or anything under 16px in Playfair.
- Removing Playfair from a surface removes the brand from it. Every screen and every post has at least one Playfair moment.

How Unify sounds

Content fundamentals

Write like a brilliant older student who has been through it, talking to a friend. Direct, honest, grounded. Never hype, never corporate, never condescending.

- Say what is actually happening. "330+ students have used Unify this month."
- Lead with impact, not features. "Knowledge stops dying in the room" beats "12 weekly modules per course".
- Never claim what is not live.
- No emoji in headlines, posts or buttons. Emoji are fine in informal chat-style UI text.
- Banned register: "Supercharge your journey", "unlock your full potential", "innovative platform", "leverages cutting-edge technology".
- Approved lines: "Built for the ones who build." "The knowledge was always in there. Nobody gave you the key." "Knowledge stops dying in the room." "Miss a class. Not the content." "Own your academic journey."
- Buttons say exactly what happens: "Mark topic complete", "Download for offline", "Join the contributor team".

Visual foundations

Colour. Black and warm white carry the system. Green is the accent, never a co-lead. – Page: **bg** everywhere, social posts included. Never pure white as a page ground. – Cards: **surface** with a **border**. Panels inside cards: **surface-2**. – Text: **text** for content, **text-muted** for secondary. **text-subtle** only for timestamps and placeholders. – Green fills use **green** with **on-green** on top. Green text uses **green-deep** at 24px and up, **green-text** below that. Never **green** as text on a light ground. – **amber** for streaks and Past Questions only. **red** for destructive actions only, never for a wrong answer. – Dark banners use **invert-bg**, **invert-text** and **invert-muted**. They flip to light in dark mode.

Type. Two fonts only: Playfair Display and DM Sans. Never Inter, Poppins, Helvetica or any other face. Headings follow **h1** to **h4**; running text follows **body-lg** and **body**; notes have their own **note-*** styles; posts have **poster-*** styles.

Shape and depth. Buttons and inputs **radius-md**, cards **radius-lg**, course cards **radius-xl**, tags **radius-pill**. Resting cards get **shadow-card** with a border; only hover and floating layers get **shadow-hover**, **shadow-drawer** or **shadow-toast**. No gradients, no glows.

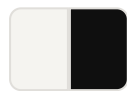

Layout. Phone gutter **space-4**. Product sections **space-12** apart. Group with space before adding lines or boxes.

Focus. A solid 2px **text** outline with a 2px offset on every interactive element.

Motion. Small and purposeful: a progress bar filling, a checked option settling. No bouncing, no confetti.

Colour

Each token shows its light value (left chip) and dark value (right chip).

bg

#f5f4f0 · dark #0f0f0f

Page background on every surface: product, notes, website and social posts. Warm off-white in light, never pure white.

surface

#ffffff · dark #1a1a1a

Cards, panels, modals and the subtopic card in notes. Sits on bg.

surface-2

#f8f7f3 · dark #222222

Recessed surface inside a card: formula and definition panels, quick checks, recall answers, input fields.

border

#e0deda · dark #2a2a2a

Dividers and card outlines. Decorative only (1.2:1 on bg in light), so a control's outline uses border-strong.

border-strong

#85847f · dark #77766f

Outline of interactive controls (inputs, answer options, secondary buttons) at 3:1 or better on bg, surface and surface-2. Added by this kit; the April kit has no equivalent.

text

#0a0a0a · dark #f0efeb

Primary text and all headings on bg, surface and surface-2. 17.9:1 on bg in light, 16.7:1 in dark.

text-muted

#555555 · dark #aaaaaa

Secondary text, descriptions and eyebrows on bg, surface and surface-2. 6.8:1 on bg in light, 8.3:1 in dark. April kit: text2.

text-subtle

#999999 · dark #666666

Timestamps, placeholders, disabled labels. April kit: text3. Only 2.6:1 on bg in light and 3.3:1 in dark, so never use it for anything a student has to read.

green

#4ade80 · dark #4ade80

THE brand accent. Fills, progress, active states, the social green bar, huge stat numbers, the full stop in the wordmark. Never as text below 120px on bg in light (1.6:1). Put on-green text on it.

green-deep

#16a34a · dark #4ade80

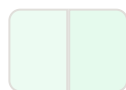

Green text at 24px and up, and bold 19px and up: headline words, links in large type, the green second line of a quote on a social post (3.3:1 on white, 3.0:1 on bg). For smaller green text use green-text.

green-text

#15803d · dark #4ade80

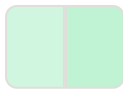

Small green text on bg, surface and surface-2 (4.6:1 on bg, 5.0:1 on surface): chips, links, correct-answer feedback. Added by this kit because green-deep fails 4.5:1 at small sizes.

green-tint

rgba(74,222,128,0.10) · dark rgba(74,222,128,0.14)

Background of green tags, the correct-answer option, the active nav item. Text on it: green-text or text. April kit: green-bg.

green-tint-border

rgba(74,222,128,0.25) · dark rgba(74,222,128,0.35)

Outline of a green tag. Decorative, always paired with a word. April kit: green-border.

on-green

#0a0a0a · dark #0a0a0a

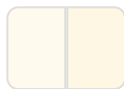

Text and icons on green fills: the green CTA, green badges, check circles. 11.4:1 on green. Never white on green.

amber

#fbbf24 · dark #fbbf24

Streaks, confidence ratings and Past Questions, sparingly. Fill only; near-black on it (11.9:1).

amber-tint

rgba(251,191,36,0.08) · dark rgba(251,191,36,0.12)

Background of an amber chip (Past Q, streak). Text on it: text. April kit: yellow-bg.

red

#ef4444 · dark #ef4444

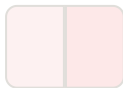

Destructive actions only (delete, leave course), as an icon or fill with a word beside it. Not for wrong quiz answers. 3.4:1 on bg in light, so red text must be 24px or bold 19px; smaller red text uses red-text.

red-text

#b91c1c · dark #ef4444

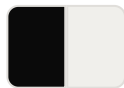

Small destructive labels on bg and surface (5.9:1 on bg in light, 5.1:1 in dark). Added by this kit.

red-tint

rgba(239,68,68,0.07) · dark rgba(239,68,68,0.12)

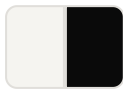

Background of a destructive confirmation panel. April kit: red-bg.

invert-bg

#0a0a0a · dark #f0efeb

Dark hero banners on light pages: the dashboard greeting, the notes topic header, the website hero. Flips to light in dark mode so the banner still stands out.

invert-text

#f5f4f0 · dark #0a0a0a

Headings and body on invert-bg (18:1 in light, 17.2:1 in dark).

invert-muted

#999999 · dark #555555

Secondary text and eyebrows on invert-bg (7.0:1 in light, 6.9:1 in dark). Added by this kit because the April invert-sub value is too faint to read.

invert-accent

#4ade80 · dark #166534

Green text on invert-bg: the eyebrow in a dark banner and in the notes topic header. 11.4:1 in light. In dark mode the banner turns light, so this darkens to 6.2:1 on #f0efeb. Added by this kit.

invert-border

#1f1f1f · dark #e0deda

Dividers inside an inverted banner or the dark checklist card on social posts.

tag-bg

#f0efeb · dark #2a2a2a

Neutral topic chip background. Text on it: text-muted, not the April tag-color #888 (3.1:1).

near-black

#0a0a0a · dark #0a0a0a

Fixed near-black in both themes: the social footer strip, the dark checklist card on posts, reversed wordmark ground.

off-white

#f5f4f0 · dark #f5f4f0

Fixed warm off-white in both themes: text on near-black, the ground of every social post.

Typography

Two fonts only: Playfair Display for what lands, DM Sans for what is read. Social sizes are for a 1080px canvas.

Display

display · Playfair Display 900 · 64px/64px · tracking -1.5px

Miss a class. Not the content.

Website hero and launch moments. Range 40 to 80px (April: clamp 40px, 8vw, 80px).

wordmark · Playfair Display 900 · 36px/36px · tracking -1px

Unify.

The wordmark at any size, full stop in green. 36px on a 1080px social post.

h1 · Playfair Display 900 · 40px/46px · tracking -1.5px

Good morning, Tobi.

Page titles in the product and on the website. Range 28 to 48px.

h2 · Playfair Display 700 · 28px/32px · tracking -1px

Your courses this week

Section titles in the product. Range 22 to 32px.

h3 · Playfair Display 700 · 20px/24px · tracking -0.5px

ECE 303

Card titles: course cards, stat cards.

h4 · Playfair Display 700 · 16px/20px · tracking 0px

Signals and Systems

Sub-card titles. The smallest size Playfair is ever set at.

quote · Playfair Display 400 italic · 22px/28px · tracking -0.5px

The knowledge was always in there.

Quotes, always Playfair italic. On a 1080px social post set at 46px with -1.5px tracking, the second line in green-deep.

tagline · Playfair Display 600 · 11px/14px · tracking 0.2em

BUILT FOR THE ONES WHO BUILD.

The tagline, uppercase, in the same typeface as the wordmark. Directly under the wordmark, left-aligned to the U, about 30% of the wordmark's size (11px under a 36px wordmark).

Notes

note-title · Playfair Display 900 · 32px/36px · tracking -1px

Laplace Transformation

Topic title in the notes header, on invert-bg.

note-heading · Playfair Display 700 · 22px/28px · tracking -0.5px

Definition of Laplace Transform

Subtopic heading at the top of each subtopic card.

note-panel-title · Playfair Display 700 · 17px/22px · tracking -0.2px

Transform of a Constant

Title of a formula or definition panel, a quick-check question, a recall question.

note-body · DM Sans 400 · 16px/28px · tracking 0

The Laplace transform turns a differential equation into an algebraic one.

Every paragraph in a note. Never Playfair. Line length at most 68 characters.

note-option · DM Sans 400 · 15px/22px · tracking 0

It converts differential equations into algebraic ones

Answer options and feedback lines in quick checks.

Text

body-lg · DM Sans 400 · 15px/24px · tracking 0

2 general courses and 4 departmental courses this semester.

Main text in the product and on the website (April: fs-body-lg).

body · DM Sans 400 · 14px/24px · tracking 0

Mark it done when you actually understand it.

Default text, in text-muted (April: p, li at 1.7 line height).

sm · DM Sans 500 · 13px/18px · tracking 0

Dashboard

Navigation, tabs, UI labels.

xs · DM Sans 400 · 12px/16px · tracking 0

Updated 2 hours ago

Small print and metadata.

micro · DM Sans 500 · 11px/14px · tracking 0

Week 3

Tags, chips, meta labels.

eyebrow · DM Sans 600 · 10px/14px · tracking 2px

ECE 303 · WEEK 1

Uppercase caps above titles. April sets it in green-deep, which is 3.0:1 at 10px; use text-muted on light grounds and invert-accent on invert-bg.

button · DM Sans 600 · 14px/20px · tracking 0

Mark topic complete

All buttons.

Social

poster-stat · DM Sans 800 · 180px/162px · tracking -7px (shown at 72px)

221

The one big number on an impact post, in green. Sizes for a 1080px canvas.

poster-headline · DM Sans 800 · 72px/76px · tracking -3px

Students.

Loud headline on social posts and flyers, near-black with one word or line in green-deep. Uppercase for calls to join, sentence case for results.

poster-sub · DM Sans 700 · 42px/46px · tracking -1.5px

Used Unify in one day.

Second line under a poster headline.

poster-body · DM Sans 500 · 26px/35px · tracking 0

330+ students have used Unify this month.

Supporting copy on a post, with a 20px text-muted line under it.

poster-strip · DM Sans 500 · 11px/14px · tracking 3px

OWN YOUR ACADEMIC JOURNEY

Uppercase line in the near-black footer strip, in off-white.

Spacing, corners and shadow

Spacing

Token	Value	Use
<code>space-1</code>	4px	Tag vertical padding, icon gaps.
<code>space-2</code>	8px	Gap between answer options, inline gaps.
<code>space-3</code>	12px	Tag horizontal padding, button vertical padding.
<code>space-4</code>	16px	Phone side gutter, gap between blocks inside a card.
<code>space-5</code>	20px	Card padding.
<code>space-6</code>	24px	Button horizontal padding, gap between cards in the product.
<code>space-8</code>	32px	Gap between subtopic cards in notes.
<code>space-10</code>	40px	Social post inset from the left and top edges (on a 1080px canvas).
<code>space-12</code>	48px	Section spacing on the website and in the product.

Corner radius

Token	Value	Use
<code>radius-sm</code>	4px	Small chips, tag backgrounds, progress bars.
<code>radius-md</code>	8px	Buttons, inputs, answer options.
<code>radius-lg</code>	12px	Cards, subtopic cards, panels, the composer box.
<code>radius-xl</code>	16px	Course cards, accordions, the dark checklist card on social posts.
<code>radius-poster</code>	28px	Large rounded panels on flyers, as in the contributor flyer's instruction panel. Social only.
<code>radius-pill</code>	9999px	Tags, badges, the active bottom-nav item, number chips.

Shadow

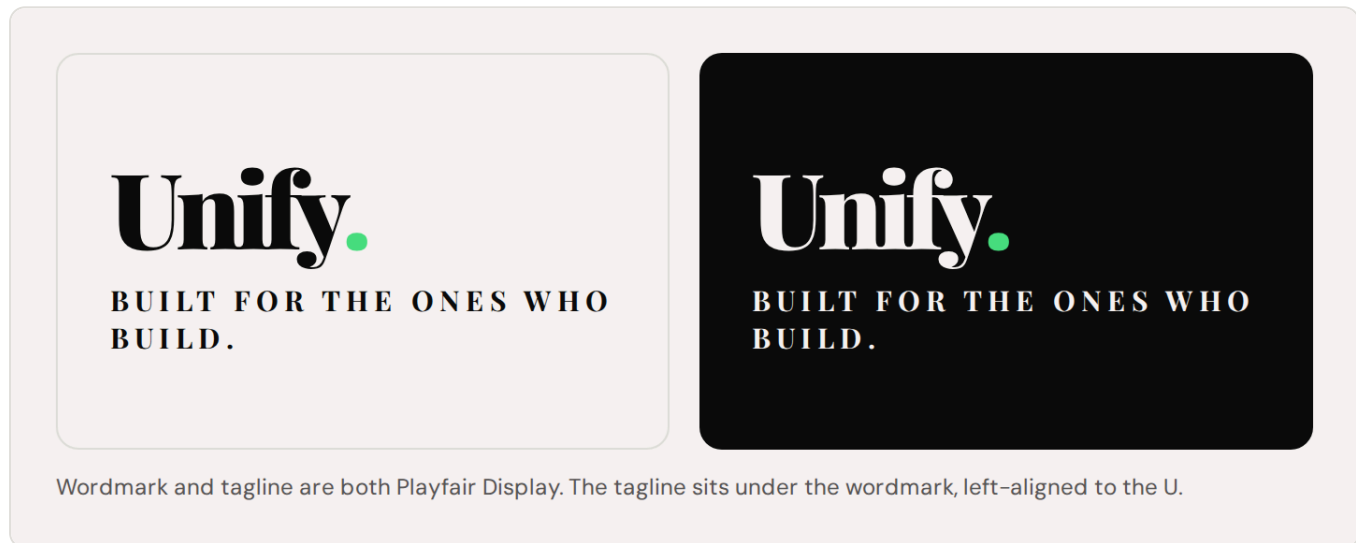

Unify uses shadows sparingly: resting cards get a whisper, only hover and floating layers get more. Values from the April kit.

Token	Value	Use
<code>shadow-card</code>	0 2px 12px rgba(0,0,0,0.06)	Resting cards: course cards, subtopic cards. Always with a border. Dark relies on the surface step instead.
<code>shadow-hover</code>	0 12px 32px rgba(0,0,0,0.10)	A course card or link card on hover. Product and website only, never in notes.

shadow-drawer	-4px 0 24px rgba(0,0,0,0.10)	Side drawers.
shadow-toast	0 8px 32px rgba(0,0,0,0.20)	Toasts and the floating Box Boy moment.

Wordmark, tagline and Box Boy

Wordmark

The Unify wordmark with its tagline lockup.

Set "Unify" in Playfair Display 900 (**wordmark**), followed by a full stop in **green** . Never retype it in another font, stretch, skew, outline or add a shadow. Keep clear space equal to the height of the U on all sides.

The tagline BUILT FOR THE ONES WHO BUILD. uses **tagline** : Playfair Display 600, uppercase, 0.2em tracking. It uses the same typeface as the wordmark, never DM Sans. Place it directly beneath the wordmark, left-aligned to the U, at about 30% of the wordmark's size (11px under a 36px wordmark).

The consumer provides the background: **off-white** for the light variant, **near-black** for the reversed one. Text on them is **near-black** and **off-white** .

Do not use **green** for the wordmark text itself, only the full stop.

Wordmark and tagline

- The wordmark is **Unify.** in Playfair Display 900 (**wordmark**) with the full stop in **green** . Never stretch, skew, outline, shadow or retype it.
- The tagline **BUILT FOR THE ONES WHO BUILD.** is uppercase Playfair Display 600 (**tagline**), the same typeface as the wordmark. It sits directly under the wordmark, left-aligned to the U. Earlier posts set it in DM Sans; the serif is the correct treatment.
- Clear space on all sides equals the height of the U.
- On social posts the lockup sits top-left at **space-10** from both edges.

Mascot: Box Boy

Box Boy wears a near-black hoodie and has a cardboard box for a head, marked with a green U. He has no face and no identity: he is every LASU engineering student. The knowledge was always in the box; Unify is the key.

- On social posts: a cut-out at the bottom-right, cropped at the waist, overlapping the green bar, about 40 to 45% of the canvas width. No ring, no frame. This replaces the April rule of a green ring with corner dots on a dark ground.
- In the product: only at meaningful moments (topic complete, empty states, onboarding, errors). Never on every screen, never in the middle of a note.
- Never recolour him, never put text over him, never full-body.

Product UI and website

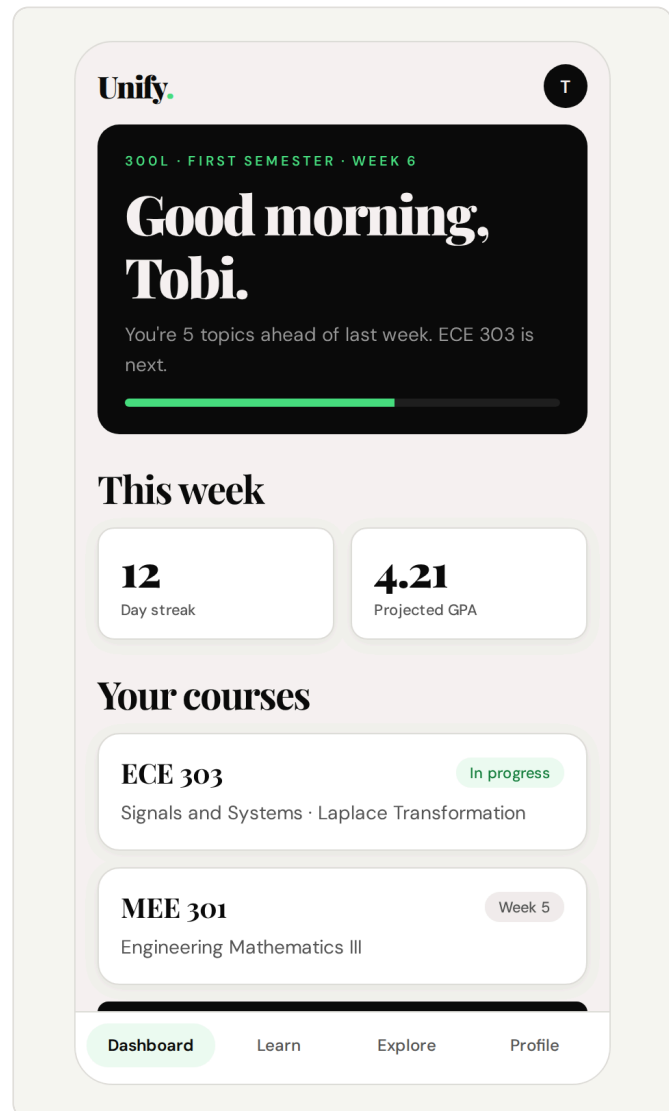

The product helps students find things: their courses, their progress, what to study next. The website uses the same shell so the app feels familiar the first time it opens. See the **AppShell** component.

The shell

1. **Top bar.** **bg** ground, **wordmark** at 22px on the left, notifications and avatar on the right. On the website, the top bar carries the main links and a green CTA.
2. **Hero banner.** One **invert-bg** banner at the top of the dashboard and the website home: an **eyebrow** in **invert-accent**, an **h1** greeting or headline in **invert-text**, a line in **invert-muted**, and a progress bar or CTA. This is the loudest moment on the screen. One per page.
3. **Content.** **h2** section titles, then cards in a grid (two columns on phones for small stat cards, one column for course cards). Course cards use **surface**, **border**, **radius-xl**, **shadow-card**, and **shadow-hover** on hover. Card titles in **h3** (Playfair), details in **body** and **micro**.
4. **Bottom navigation** (app only). **surface** bar with a top **border**: Dashboard, Learn, Explore, Profile, labels in **sm**. The active item sits in a **green-tint** pill with **text**. It hides while a note is open (see Notes UI).

Rules

- Big numbers (streak days, GPA, courses done) are Playfair 900 in **text**, labels under them in **micro text-muted**.
- One primary action per screen: **text** fill button in the app, **green** fill with **on-green** on the website and in empty states.

- Colour stays surgical: green for the active state, progress and one CTA. Everything else is black, warm white and grey.
- Box Boy appears in empty states and onboarding, never in the regular dashboard.
- The website hero may use **display** (40 to 80px) and a Box Boy cut-out on the right, echoing the social template.

Notes UI

Notes are the book inside the shop. The product can be loud; a note is a quiet reading mode that still reads as Unify. It opens with one product moment, the dark topic header, then gets out of the way. See the **ReadingMode**, **NoteSection**, **QuickCheck** and **RecallCard** components.

Where the line sits

	Product UI	Notes UI
Job	Find	Learn
Width	Full width, card grids	One column, max 680px
Body text	body 14px, body-lg 15px	note-body 16px with 28px line height
Playfair	Titles, card titles, big numbers	Topic title, subtopic headings, panel titles, questions only
Dark banner	Hero on dashboard and website	Topic header only, once, at the top
Navigation	Bottom nav always visible	Bottom nav hidden; a slim top bar with Back, topic progress and Download for offline
Shadows	Card and hover shadows	shadow-card only, no hover effects
Green	Active states, one CTA	Progress, number chips, correct answers
Box Boy	Empty states, onboarding	Only on the topic-complete screen

Shared by both: every token, both fonts, the wordmark, buttons, tags and the focus style.

The Playfair rule in notes

The CTO is right that paragraphs in Playfair are tiring to read on a phone, and the founder is right that without Playfair the notes lose the brand. Both hold:

- Playfair: **note-title**, **note-heading**, **note-panel-title** (panel titles, quick-check and recall questions). All 17px and up.
- DM Sans: every paragraph (**note-body**), answer option (**note-option**), label and button.

Layers

Three levels of depth, so the eye knows where to go first:

1. Page: **bg**.
2. One card per subtopic: **surface**, 1px **border**, **radius-lg**, **shadow-card**, **space-5** padding, **space-8** between cards.

- Panel inside a card for the thing to remember (formula, definition, quick check): **surface-2**, **radius-lg**, no border, no shadow.

Inside a card: a number chip (**green-tint**, **green-text**, **radius-pill**), the **note-heading**, **note-body** paragraphs with key terms in bold, then panels.

Block structure

Block	Job	Look
Topic header	Says where you are	invert-bg band: eyebrow in invert-accent (course and week), note-title , topic tags
Subtopic card	The reading	Card with number chip, note-heading , note-body
Formula or definition panel	Something to remember	surface-2 panel, note-panel-title , formula centred
Quick Check	Confirms the subtopic landed	One per subtopic, surface-2 panel after the subtopic card
Topic Active Recall	Recall after the topic	RecallCard , answer hidden until tapped
Pulse Check	Mixed practice at the end	A flat list of questions under one heading, never a card per question

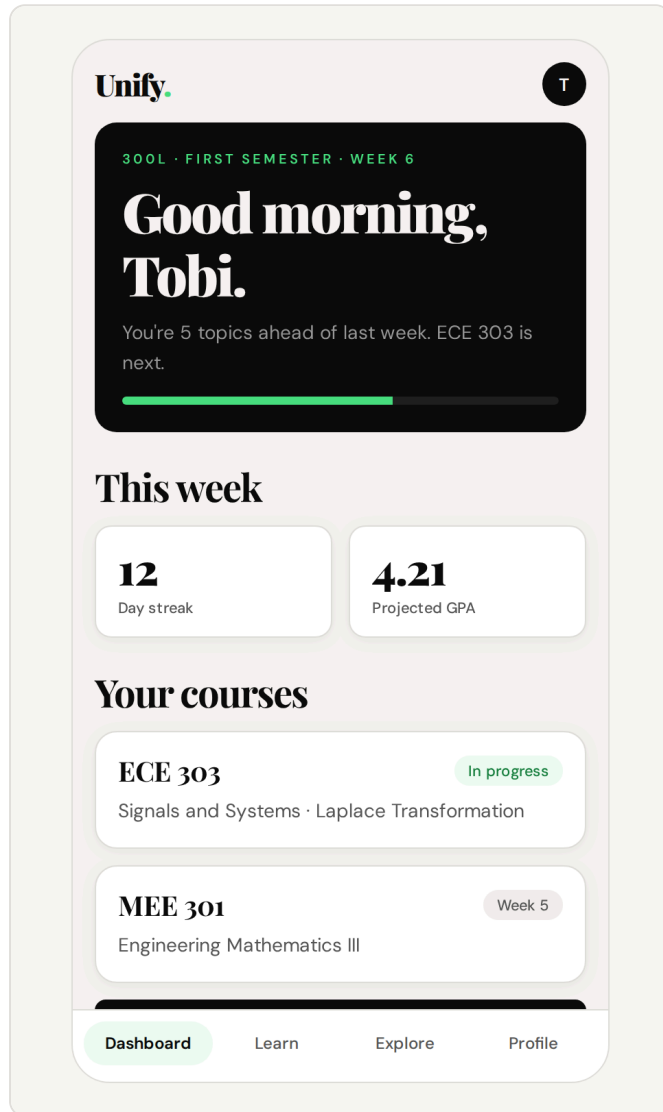

Rules the Note Engine must follow: – One Quick Check per subtopic. No repeated questions across blocks. – Never a card inside a card. A panel sits inside a card; nothing sits inside a panel. – Recall answers stay hidden until the student taps Reveal. – Every input, option and button uses the brand controls. Browser-default inputs are a bug. – Nothing fixed may cover a heading.

Leaving the app

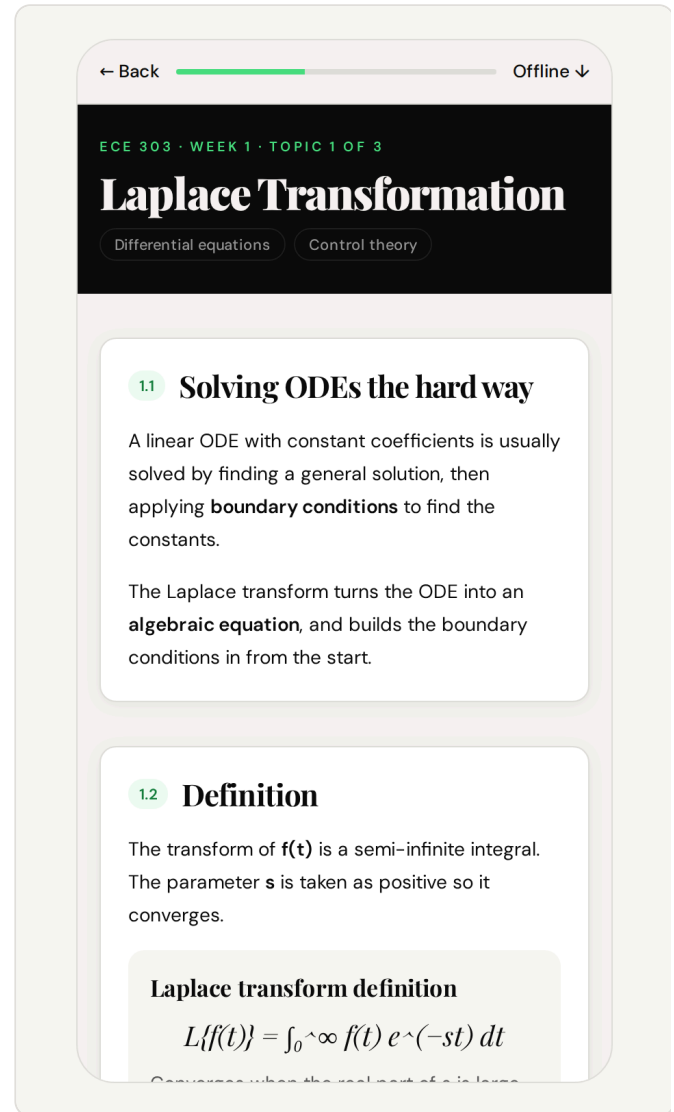

No Save PDF. Offer "Download for offline": the note is saved inside the app, opens without data, and still opens in Unify.

Notes UI, side by side

Product (find)

Notes (learn)

Note components

NoteSection

TOPIC 1 · INTRODUCTION TO LAPLACE TRANSFORMATION

1.2 Definition of Laplace Transform

The Laplace transform of a function **f(t)** is defined as a **semi-infinite integral**. The parameter **s** is assumed positive so the integral converges.

Laplace Transform Definition

$$L\{f(t)\} = \int_0^{\infty} f(t) e^{-st} dt$$

The integral converges when the real part of s is large enough and positive.

One subtopic of a Unify Learn note: a card holding the heading, explanation and any formula or definition panel.

The consumer provides the subtopic number (1.1, 1.2), the heading, the explanation paragraphs with key terms in bold, and optional panels. The Note Engine renders formulas with MathJax inside the panel.

- Card: **surface**, 1px **border**, **radius-lg**, **shadow-card**, **space-5** padding, **space-4** between blocks.
- Eyebrow above the heading: **eyebrow** in **text-muted**.
- Number chip: **green-tint** fill, **green-text**, **radius-pill**.
- Heading: **note-heading** (Playfair Display 700, 22px).
- Explanation: **note-body** (DM Sans 16px, 28px line height), at most 68 characters a line, paragraphs of at most five lines. Bold only key terms.
- Panel: **surface-2**, **radius-lg**, no border and no shadow. A panel title in **note-panel-title** and a closing note in **text-muted**.

Never put a card inside a panel or a card inside a card. Leave **space-8** between consecutive NoteSections.

QuickCheck

QUICK CHECK · 1 QUESTION

What is the main advantage of using Laplace transforms to solve differential equations?

- ☐ A It removes the need for integration
- ☒ B It converts differential equations into algebraic ones
- ☐ C It only works for second-order equations

Correct. Boundary conditions go in from the start, so you solve algebra, not calculus.

A short multiple-choice or fill-in check placed once after each subtopic; a set of them forms the Pulse Check.

The consumer provides the question, options with one marked correct, and a one-line explanation shown after an answer.

- Container: **surface-2** panel, **radius-lg**, **space-5** padding. It sits between NoteSection cards, never inside a card and never with another card inside it.
- Eyebrow: "Quick check · N question(s)" in **eyebrow**, **text-muted**.
- Question: **note-panel-title** (Playfair Display 700, 17px). Options: **note-option** (DM Sans 15px), never Playfair.
- Options: full-width buttons on **surface**, 1px **border-strong**, **radius-md**, a letter key in a round chip.
- Correct: **green-tint** fill, **green-text** outline, key on **green**. Wrong: dashed **text** outline. Feedback text always says "Correct." or "Not quite." so colour is never the only signal.
- Fill-in answers use the same outlined input as options, never a browser-default input.
- Pulse Check: one heading and a flat list of questions. Never wrap each question in its own card.

RecallCard

TOPIC ACTIVE RECALL · MECHANISM

How does the Laplace transform handle boundary conditions compared to standard ODE methods?

Reveal answer

A recall prompt at the end of a topic that hides its answer until the student taps Reveal.

The consumer provides a category label (Mechanism, Application), the question and the answer.

- Card: `surface`, `1px border`, `radius-lg`, `shadow-card`, `space-5` padding.
- Label: `eyebrow` in `text-muted`. Question: `note-panel-title`.
- Answer: `surface-2` panel, `radius-md`, hidden by default.
- Reveal: secondary Button, label toggles between "Reveal answer" and "Hide answer".

Never print the answer under the question without a tap; that removes the recall.

Social posts and flyers

The April kit described dark 9:16 posts with Box Boy in a green ring. The posts that went out since (the 221 Students impact post and the contributor flyer) settled on a different, lighter template, and that template is now the standard. See the **SocialPost** component and the Campaign asset group.

The fixed template

Three elements appear on every post in the same place, so a post is recognisable before anyone reads it:

1. **Green bar.** A **green** bar on the right edge, 72px wide on a 1080px canvas, from the top to about 60% of the height.
2. **Lockup.** **wordmark** with **tagline** under it, top-left, **space-10** from the top and left edges.
3. **Footer.** Either a 52px **near-black** strip with one **poster-strip** line in **off-white**, or a row of social handles on the ground. Handles: Instagram @unifylearnn, LinkedIn Unify Learn, TikTok @unify.learn, X @UnifyLearnn.

Plus Box Boy as a cut-out at the bottom-right, overlapping the bar.

Formats

- 1080 × 1080 for the feed.
- 1080 × 1350 (4:5) for flyers and feed posts that need more room.
- 1080 × 1920 (9:16) for Status and Stories: the same template with more space between the headline and the content.

Type on posts

Posts are the one place a heavy sans leads, because it has to stop the scroll. The middle ground:

- Headlines and stats: **poster-stat**, **poster-headline**, **poster-sub** (DM Sans 800 and 700). Near-black with one word or line in **green-deep**; the big stat in **green**.
- One Playfair moment on every post besides the lockup: a **quote** in italic (second line in **green-deep**), or a Playfair sub-line. This is what keeps posts premium.
- Supporting copy: **poster-body**, with a smaller **text-muted** line under it.

Colour on posts

- Ground: **off-white**. Not pure white (the impact post) and not a separate paper colour (the flyer): one warm white across the brand.
- Green: **green** for the bar, fills, check circles and the one huge number; **green-deep** for green words in headlines. The flyer's darker green (#00B048) is retired in favour of these two.
- Black: **near-black** for headlines, the footer strip and the dark checklist card.

Building blocks

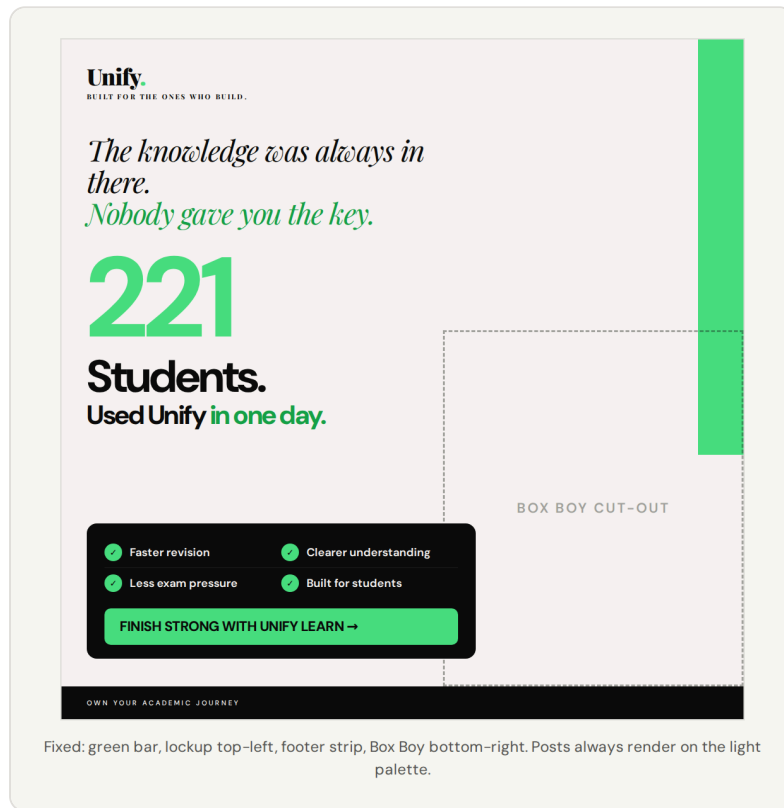

- **Checklist card.** **near-black** , **radius-xl** , a two-by-two grid of benefits with **green** check circles and **off-white** text, dividers in **invert-border** , and a **green** CTA bar inside with **on-green** text.
- **Steps panel.** A light rounded panel (**radius-poster**) with green uppercase step labels (Contribute, Refine, Build) and **poster-body** text, as on the contributor flyer.
- **Stamp.** Optional: a rotated circle outline in **green-deep** with a number and label, for impact moments.
- **CTA.** An outlined or green box with the action in uppercase: "Join the contributor team", "Finish strong with Unify Learn". No emoji.

Don't

- Don't add a fourth colour.
- Don't move the bar, the lockup or the footer.
- Don't set the whole post in Playfair or the whole post in sans.
- Don't use emoji on a post.

The template

SocialPost

The social post template at 1080 × 1080, built from the 221 Students impact post with the brand fixes applied.

The consumer provides the quote, the stat or headline, supporting lines, the checklist or steps, the CTA, the footer line, and a Box Boy cut-out image.

Fixed on every post: – **green** bar on the right edge, 72px wide, top to about 60% of the height. – Lockup top-left at **space-10**: **wordmark** at 36px, **tagline** in Playfair under it. – Footer: 52px **near-black** strip with a **poster-strip** line, or the social handles row. – Box Boy cut-out bottom-right, overlapping the bar, 40 to 45% of the width.

Content: – One Playfair moment: **quote** in italic at 46px, second line in **green-deep**. – Stat in **poster-stat green**, headline in **poster-headline**, sub-line in **poster-sub** with the key phrase in **green-deep**. – Checklist card: **near-black**, **radius-xl**, **green** check circles with **on-green**, **invert-border** dividers, a **green** CTA bar inside.

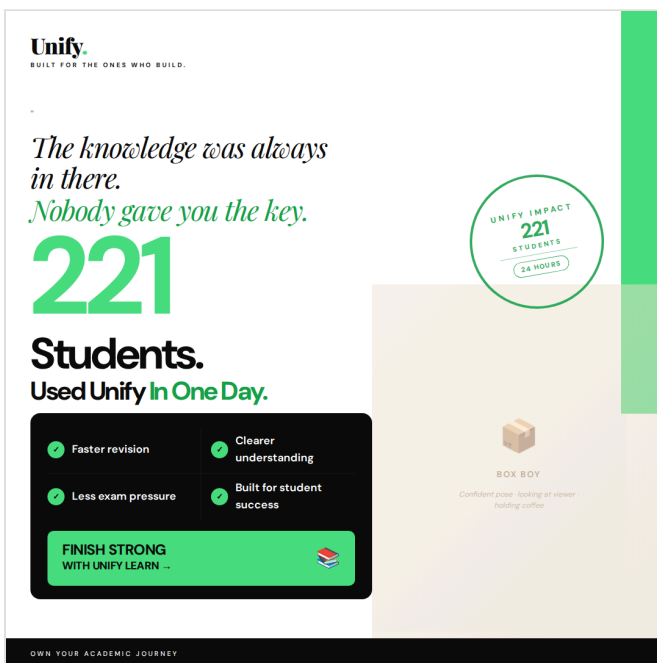

Ground is **off-white**, never pure white. No emoji. Posts always use the light palette, whatever the viewer's theme.

Reference posts

Reference posts for the social template.

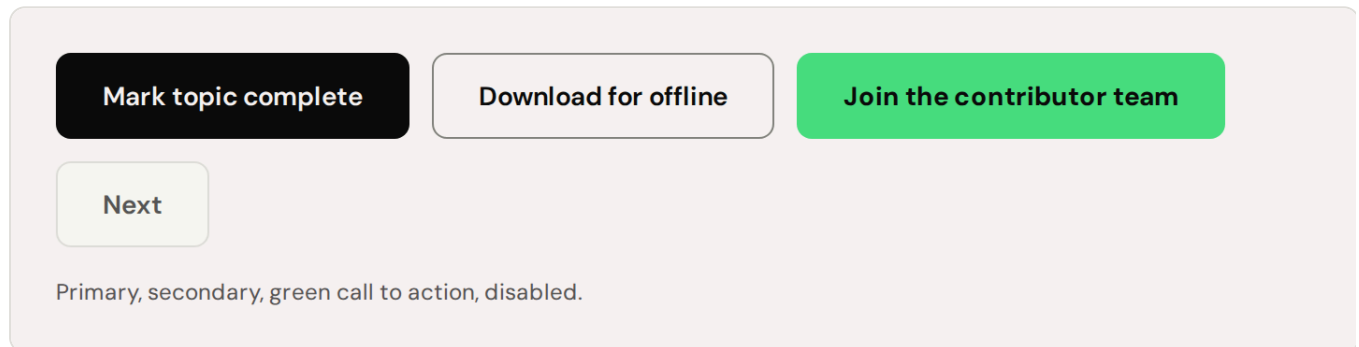

- **impact-post-221.png** : the 221 Students impact post (1080 × 1080), rendered from its source file with its own fonts. Its Box Boy zone is still a placeholder in the source. Where it differs from the kit: pure white ground (use **off-white**), tagline in DM Sans (use Playfair), and an emoji in the CTA (remove).
- **contributor-flyer.jpg** : the Become a Student Contributor flyer (4:5). Where it differs from the kit: a darker green #00B048 (use **green** for fills and **green-deep** for green words), and a tagline in a sans (use Playfair).

Both are flat rasters. Don't crop Box Boy or recolour anything from them; build new posts from the **SocialPost** template.

Shared controls

Button

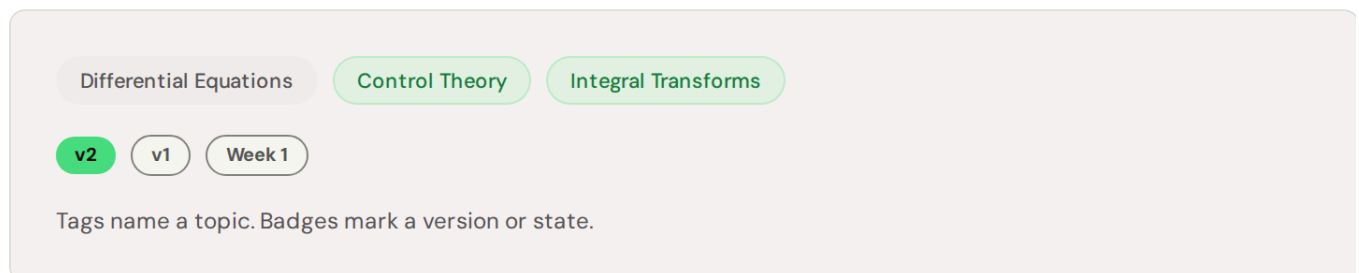

Buttons for every action in the Unify apps.

Use **button** type (DM Sans 14px, weight 600), **space-3** vertical and **space-6** horizontal padding, **radius-md**. The consumer provides the label, which says exactly what happens ("Mark topic complete", "Download for offline").

- Primary: **text** background, **bg** text. One per view.
- Secondary: transparent, 1px **border-strong**, **text** label. Use **border-strong**, not **border**, so the outline reaches 3:1.
- Green call to action: **green** background, **on-green** label, weight 700. For the single main action on a marketing surface, not inside notes.
- Disabled: **surface-2** background, **text-muted** label.

Keyboard focus is a solid 2px **text** outline with a 2px offset. Never render a browser-default button. Never use white on green.

TagBadge

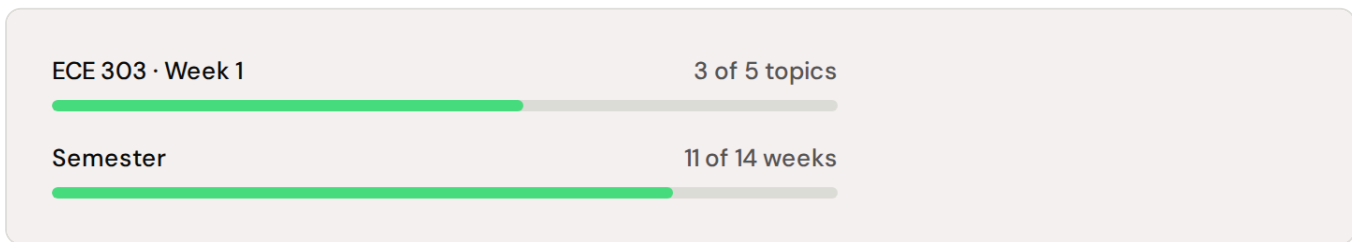

Tags label a topic; badges mark a version or state.

Tags: **micro** (DM Sans 11px, weight 500), **space-1** by **space-3** padding, **radius-pill**, **tag-bg** fill, **text-muted** text. The green variant uses **green-tint** fill, **green-tint-border** outline and **green-text**. The consumer provides a short text label.

Badges: DM Sans 10px weight 700, **radius-pill**. Green badge: **green** fill with **on-green** text. Neutral badge: **surface-2** fill with **text-muted**.

Colour never carries meaning alone. A badge always says the word ("v2", "Done"). Use the green variant for at most one or two items in a row.

ProgressBar

A thin bar showing progress through a topic, week or semester.

Track: 6px high, `border` fill, `radius-sm`. Fill: `green`, `radius-sm`. The consumer provides the value and a label with the count in words ("3 of 5 topics"), set in `ui-label` with the count in `text-muted`. Always show the count as text; the bar alone does not carry the number.
